Facial Attendance System

AI Tool(s) Used and How They Were Used

Member	AI Usage Details
Member 1 (Serena Salman)	Tool used: Claude (Anthropic), via the Claude.ai web chat interface. Prompts used: • "Review my face recognition implementation and suggest improvements for error handling. Includesituations such as no webcam detected, no face found during registration, multiple faces detected, missing encoding file, and duplicate user registration." • "Review my register_faces.py, encode_faces.py, and face_recognizer.py files for readability,efficiency, and Python best practices. Suggest improvements without changing the overall functionality." "Explain how OpenCV detects faces using Haar Cascade. Then show how to integrate face detectioninto register_faces.py so that only detected faces are saved."
Member 2 (Lamia Gul)	Tool used: Claude (Anthropic), via the Claude.ai web chat interface. Prompts / requests used (paraphrased): • Divide the Facial Attendance System project into two equal parts for a 2-day timeline each, with tasks, files,functions, dependencies, and expected output for each member. • As Member 2, explain the required dependencies, project structure, and environment setup steps. • Diagnose and fix real errors encountered: cv2 import failure, a corruptedOpenCV install traced to a full system drive, and an OpenCV webcam backend error on Windows. Review my attendance_manager.py and main.py for readability,efficiency, and Python best practices. Suggest improvements without changing the overall functionality., integrated with the teammate's recognition module.
